1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
ss indicates the S-level commodity code (from 9 to 28)
mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
nn indicates either a split of the M-level commodity,
or 91, which indicates a special aggregation
or 99, which indicates special details
pppp indicates the PCG code (except for some special aggregations which include several PCGs).
rr indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E + S) is given; occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnnn), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité.

Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où:

ss indique le code du niveau S des produits (de 9 à 28)

mm indique le code du niveau M des produits (de 14 à 43, 45 à 69)

nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particuliers.

pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprennent plusieurs GPP)

rr indique une composante d'un GPP.

La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E + S). Ces mesures du degré de couverture sont parfois arrondies au 5% le plus près afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. Note: Indexes for the most recent six months shown are subject to revision.

Note: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(2) The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

(2) Le code numérique à la droite du numéro Datbank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification. — Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

INDUSTRIAL PRODUCT PRICE INDEXES, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported most often for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about 6 weeks after the reference period in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the *Daily Bulletin* release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,000 producers for goods sold which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is made of the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct surveys and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining

INDICES DES PRIX DES PRODUITS INDUSTRIELS, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés le plus souvent pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ six semaines après la fin de la période de référence dans le *Quotidien* (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,000 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'enquêtes directes, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir

600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input/Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically as required in December of each year, while weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

The 1981 = 100 industry aggregation of elemental commodities is directly relatable to the 1971 = 100 Industry Selling Price Indexes which is available from 1956 to 1985. In a note to users provided with the September 1985 issue of Catalogue 62-011 *Industry Price Indexes* the nearest equivalent series for both the 1971 and the 1981 based series were identified and the degree of comparability of the two series was stated. Link factors,

de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activité proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux successivement plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w^i sont les valeurs de la production de chaque produit:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini;

w^i est la valeur de transaction de l'élément i au cours de la période de référence;

$P_{t/o}^i$ est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t;

\sum_i signifie la sommation de tous les éléments i dans l'agrégat défini.

Données historiques

L'agrégation par industries basée 1981 = 100 des produits élémentaires se rattache directement aux indices des prix de vente dans l'industrie 1971 = 100, qui existent pour la période 1956-1985. La note aux utilisateurs parue dans le numéro de septembre 1985 de la publication n° 62-011 au catalogue *Indices des prix de l'industrie* identifiait la série équivalente la plus proche pour les séries basées sur 1971 et 1981, ainsi que le degré de comparabilité. Les facteurs de raccordement, calculés à partir de

derived from the relationship of the two series in December 1985, will also be published in the January issue of Catalogue 62-011. These link factors will not be revised. Users can obtain a continuous series on a 1971 = 100 base by consulting the July 1984 and the December 1985 issues of Catalogue 62-011 or by retrieving the data from CANSIM.

RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes, 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it re-distributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at

INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matière brute" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix d'autres sources bien connues soient utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont

the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w_i}{\sum w_i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w_i is the transaction value of the element i in 1981;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances where data are not available, the price quotations are equally weighted.

pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié;

w_i est la valeur de transaction de l'élément i en 1981;

$P_{t/o}^i$ est l'indice de prix pour l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t;

\sum_i indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the Industry Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLEC- TRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnés d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

- 1) Indexes are listed in the order they appear in Industry Price Indexes, catalogue 62-011. - L'ordre de présentation des indices est similaire à celui que l'on retrouve dans l'Indice des Prix de l'Industrie, catalogue 62-011.
- 2) CANSIM D Codes for the annual series are 50 thousand higher than the monthly code. - Les codes D de CANSIM pour les séries annuelles sont plus élevés de 50 mille que les codes pour les séries mensuelles.
- 3) The degree of compatibility for major groups and industries are given in percentage. The letters used on the following meaning. - Le degré de correspondance pour groupe majeur sont donné en pourcentage. Les lettres utilisées prennent la signification suivante:
 - A) the old index is an exact match to the new index - l'ancien et le nouvel indice correspondent parfaitement.
 - B) the old index is totally included in the coverage of the new index - l'ancien indice est couvert en totalité par le nouvel indice.
 - * this index accounts for less than 50 percent of the new 1981 based index - cet indice représente moins de 50 pourcent du nouvel indice basé sur 1981.
 - C) there is some overlap between the old and new index but neither is totally included in the coverage of the other - l'ancien et le nouvel indice se chevauchent partiellement, toutefois aucun des deux ne couvrent l'autre en totalité.
 - F) there is no single match available - aucun indice correspondant n'est disponible.
- 4) A number of codes have been combined to describe where the indexes fit in the various classifications. They are not recommended as identifiers. - Un certain nombre de codes furent combinés afin d'indiquer l'endroit où les indices s'insèrent dans les diverses classifications. Ces combinaisons de codes ne peuvent cependant servir à identifier les indices.
- 5) These CANSIM D codes refer to the monthly series. Annual averages are available through the same CANSIM codes by requesting the Extended Display Option or by using RPT command of the CANSIM Interactive System (CIS). Users are advised to use the CANSIM D codes as identifiers.
- 5) Ces codes D de CANSIM permettent d'obtenir les séries mensuelles. Les moyennes annuelles sont disponibles via les mêmes codes D de CANSIM, soit en utilisant la commande "Extended Display Option", soit en faisant appel au Système interactif CANSIM (SIC) via la commande RPT. Les usagers doivent de préférence utiliser les codes de CANSIM en tant que numéros.

CANADIAN INTERNATIONAL TRADING PATTERNS

Why does Canada's current trade account show a surplus?

Where are our most lucrative markets in the United States?

Find the answers in Statistics Canada's latest chartbook, **Canadian International Trading Patterns**. This publication reviews Canada's relationships with its principal trading partners from 1970 to 1984. The highlights illustrated by the eighty coloured charts include the declining importance of trade with Europe and the recent shift from trade deficit to surplus in the motor vehicle sector. A calendar of events that have had a major effect on trade, such as the 1984 shutdown of pulp and paper mills in British Columbia, is also featured.

PROFIL DU COMMERCE INTERNATIONAL CANADIEN

Pourquoi y a-t-il un excédent dans le compte courant commercial canadien?

Quels sont les marchés américains les plus lucratifs pour nous?

Vous trouverez les réponses à ces questions dans **Profil du commerce international canadien**, le plus récent recueil de graphiques de Statistique Canada. Ce recueil étudie les relations du Canada avec ses principaux partenaires commerciaux entre 1970 et 1984. Parmi les faits saillants illustrés par les 80 graphiques en couleur, on compte la baisse de l'importance des échanges commerciaux avec l'Europe et la tendance nouvelle vers un excédent commercial plutôt qu'un déficit dans le secteur automobile. On y présente également les événements ayant eu des répercussions sur les pratiques commerciales, telle la fermeture des usines de pâtes et papiers en Colombie-Britannique en 1984.

1) This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes.

1) Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.

2) These indexes are preliminary.

2) Ces indices sont provisoires.

(1) Revised

(1) Révisé

(2) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(2) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates special details. pppp indicates the PCG code (except for some special aggregations which include several PCGs). rr indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E + S) is given; occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnnn), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité.

Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où:

ss indique le code du niveau S des produits (de 9 à 28)

mm indique le code du niveau M des produits (de 14 à 43, 45 à 69)

nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particuliers.

pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprennent plusieurs GPP)

rr indique une composante d'un GPP.

La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E + S). Ces mesures du degré de couverture sont parfois arrondies au 5% le plus près afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. (1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(2) The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

(2) Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification. — Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

INDUSTRIAL PRODUCT PRICE INDEXES, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported most often for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about 6 weeks after the reference period in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the *Daily Bulletin* release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,000 producers for goods sold which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is made of the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct surveys and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining

INDICES DES PRIX DES PRODUITS INDUSTRIELS, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés le plus souvent pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ six semaines après la fin de la période de référence dans le *Quotidien* (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,000 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'enquêtes directes, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir

600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input/Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically as required in December of each year, while weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activité proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux successivement plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w^i sont les valeurs de la production de chaque produit:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini;

w^i est la valeur de transaction de l'élément i au cours de la période de référence;

$P_{t/o}^i$ est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t;

\sum_i signifie la sommation de tous les éléments i dans l'agrégat défini.

Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux Indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes, 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it re-distributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at

INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matière brute" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitué recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix d'autres sources bien connues soient utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont

the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w_i}{\sum w_i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w_i is the transaction value of the element i in 1981;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances where data are not available, the price quotations are equally weighted.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone 613-990-9611.

pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié;

w_i est la valeur de transaction de l'élément i en 1981;

$P_{t/o}^i$ est l'indice de prix pour l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t;

\sum_i indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the Industry Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnés d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

CANADIAN INTERNATIONAL TRADING PATTERNS

Why does Canada's current trade account show a surplus?

Where are our most lucrative markets in the United States?

Find the answers in Statistics Canada's latest chartbook, **Canadian International Trading Patterns**. This publication reviews Canada's relationships with its principal trading partners from 1970 to 1984. The highlights illustrated by the eighty coloured charts include the declining importance of trade with Europe and the recent shift from trade deficit to surplus in the motor vehicle sector. A calendar of events that have had a major effect on trade, such as the 1984 shutdown of pulp and paper mills in British Columbia, is also featured.

Canadian International Trading Patterns, Catalogue No. 65-503C, is available for \$25.00 in Canada (\$26.00 elsewhere) from Publication Sales and Services, Statistics Canada, Ottawa, Canada K1A 0T6. Telephone: (613) 993-7276.

PROFIL DU COMMERCE INTERNATIONAL CANADIEN

Pourquoi y a-t-il un excédent dans le compte courant commercial canadien?

Quels sont les marchés américains les plus lucratifs pour nous?

Vous trouverez les réponses à ces questions dans **Profil du commerce international canadien**, le plus récent recueil de graphiques de Statistique Canada. Ce recueil étudie les relations du Canada avec ses principaux partenaires commerciaux entre 1970 et 1984. Parmi les faits saillants illustrés par les 80 graphiques en couleur, on compte la baisse de l'importance des échanges commerciaux avec l'Europe et la tendance nouvelle vers un excédent commercial plutôt qu'un déficit dans le secteur automobile. On y présente également les événements ayant eu des répercussions sur les pratiques commerciales, telle la fermeture des usines de pâtes et papiers en Colombie-Britannique en 1984.

Profil du commerce international canadien, n° 65-503C au catalogue, se vend 25\$ au Canada (26\$ autres pays) et peut être obtenu auprès de Publications — Vente et service, Statistique Canada, Ottawa Canada, K1A 0T6. Tél.: (613) 993-7276.

(1) Revised.

(1) Révisé.

(2) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(2) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total des produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
 ss indicates the S-level commodity code (from 9 to 28)
 mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
 nn indicates either a split of the M-level commodity,
 or 91, which indicates a special aggregation
 or 99, which indicates special details.
 pppp indicates the PCG code (except for some special aggregations which include several PCGs).
 rr indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E + S) is given; occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnnn), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité.

Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où:

ss indique le code du niveau S des produits (de 9 à 28)

mm indique le code du niveau M des produits (de 14 à 43, 45 à 69)

nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particuliers.

pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprennent plusieurs GPP)

rr indique une composante d'un GPP.

La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E + S). Ces mesures du degré de couverture sont parfois arrondies au 5% le plus près afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. (1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(2) The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

(2) Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification. — Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

INDUSTRIAL PRODUCT PRICE INDEXES, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported most often for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about 6 weeks after the reference period in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the *Daily Bulletin* release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,000 producers for goods sold which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is made of the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct surveys and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining

INDICES DES PRIX DES PRODUITS INDUSTRIELS, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés le plus souvent pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ six semaines après la fin de la période de référence dans le *Quotidien* (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,000 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'enquêtes directes, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir

600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input/Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically as required in December of each year, while weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

The 1981 = 100 industry aggregation of elemental commodities is directly relatable to the 1971 = 100 Industry Selling Price Indexes which is available from 1956 to 1985. In a note to users provided with the September 1985 issue of Catalogue 62-011 *Industry Price Indexes* the nearest equivalent series for both the 1971 and the 1981 based series were identified and the degree of comparability of the two series was stated. Link factors,

de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activité proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux successivement plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w^i sont les valeurs de la production de chaque produit:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini;

w^i est la valeur de transaction de l'élément i au cours de la période de référence;

$P_{t/o}^i$ est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t;

\sum_i signifie la sommation de tous les éléments i dans l'agrégat défini.

Données historiques

L'agrégation par industries basée 1981 = 100 des produits élémentaires se rattache directement aux indices des prix de vente dans l'industrie 1971 = 100, qui existent pour la période 1956-1985. La note aux utilisateurs parue dans le numéro de septembre 1985 de la publication n° 62-011 au catalogue *Indices des prix de l'industrie* identifiait la série équivalente la plus proche pour les séries basées sur 1971 et 1981, ainsi que le degré de comparabilité. Les facteurs de raccordement, calculés à partir de

RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes, 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it re-distributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at

INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matière brute" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix d'autres sources bien connues soient utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont

the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1981;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances where data are not available, the price quotations are equally weighted.

pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié;

w^i est la valeur de transaction de l'élément i en 1981;

$P_{t/o}^i$ est l'indice de prix pour l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t;

\sum_i indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the Industry Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnés d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. (1) Revised.

(1) Révisé.

(2) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(2) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates special details. pppp indicates the PCG code (except for some special aggregations which include several PCGs). rr indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given; occasionally these coverage measures are rounded to the nearest 5%, to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue No. 62-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnnn), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité.

Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où:

ss indique le code du niveau S des produits (de 9 à 28)

mm indique le code du niveau M des produits (de 14 à 43, 45 à 69)

nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particuliers.

pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprennent plusieurs GPP)

rr indique une composante d'un GPP.

La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E+S). Ces mesures du degré de couverture sont parfois arrondies au 5%, le plus près afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(2) The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5%, to preserve confidentiality.

(2) Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification. - Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported most often for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about 6 weeks after the reference period in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the *Daily Bulletin* release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,000 producers for goods sold which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is made of the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct surveys and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining

Indice des prix des produits industriels, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés le plus souvent pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ six semaines après la fin de la période de référence dans le *Quotidien* (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,000 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'enquêtes directes, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir

600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input/Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically as required in December of each year, while weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

The 1981 = 100 industry aggregation of elemental commodities is directly relatable to the 1971 = 100 Industry Selling Price Indexes which is available from 1956 to 1985. In a note to users provided with the September 1985 issue of Catalogue 62-011 *Industry Price Indexes* the nearest equivalent series for both the 1971 and the 1981 based series were identified and the degree of comparability of the two series was stated. Link factors,

de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activité proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux successivement plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w^i sont les valeurs de la production de chaque produit:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini;

w^i est la valeur de transaction de l'élément i au cours de la période de référence;

$P_{t/o}^i$ est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t;

\sum_i signifie la sommation de tous les éléments i dans l'agrégat défini.

Données historiques

L'agrégation par industries basée 1981 = 100 des produits élémentaires se rattache directement aux indices des prix de vente dans l'industrie 1971 = 100, qui existent pour la période 1956-1985. La note aux utilisateurs parue dans le numéro de septembre 1985 de la publication n° 62-011 au catalogue *Indices des prix de l'industrie* identifiait la série équivalente la plus proche pour les séries basées sur 1971 et 1981, ainsi que le degré de comparabilité. Les facteurs de raccordement, calculés à partir de

derived from the relationship of the two series in December 1985, will also be published in the January issue of Catalogue 62-011. These link factors will not be revised. Users can obtain a continuous series on a 1971 = 100 base by consulting the July 1984 and the December 1985 issues of Catalogue 62-011 or by retrieving the data from CANSIM.

Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes, 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it re-distributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at

INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matière brute" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix d'autres sources bien connues soient utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont

the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1981;

$P_{t/o}^i$ is the price index for element i, meaning its price change from the base period to time t;

\sum_i indicates summation over all elements i in the defined aggregate.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances where data are not available, the price quotations are equally weighted.

pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié;

w^i est la valeur de transaction de l'élément i en 1981;

$P_{t/o}^i$ est l'indice de prix pour l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t;

\sum_i indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the Industry Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnés d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

■ Canada's Industries: Growth in Jobs Over Three Decades A Review of the Changing Industrial Mix of Employment 1951-1984

Which Canadian industries and sectors were responsible for creating the most jobs during the 50s, 60s, 70s and early 80s? To what degree has this changed over time?

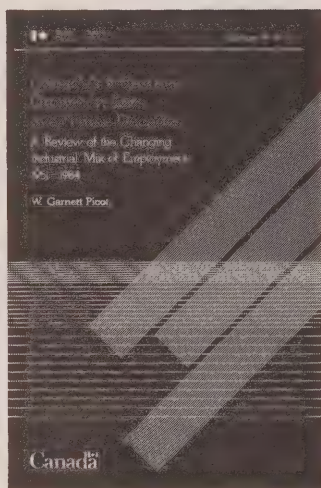

These are just two of the many questions addressed in this report. It reviews employment trends in Canada's industries and service sectors between 1951 and 1984, and explains why the mix of employment among industries has changed.

The report concentrates on two broad factors:

- changes in the demand for goods and services;
- variations among industries in the rate of productivity increase.

Data from a study using input-output analysis are also included to reach some conclusions about the importance of industrial employment during the 1970s.

■ Évolution de l'emploi dans les secteurs d'activité économique du Canada au cours de trois décennies Étude de la répartition industrielle de l'emploi, 1951-1984

Quelles industries et quels secteurs au Canada ont été responsables de la création du plus grand nombre d'emplois durant les années 1950, 1960, 1970 et au début des années 1980? Jusqu'à quel point y a-t-il eu des changements au cours des années?

Ce ne sont là que deux des nombreuses questions auxquelles répond ce rapport. On y passe en revue les tendances de l'emploi dans les secteurs des services et les industries au Canada entre 1951 et 1984, tout en expliquant pourquoi la distribution de l'emploi parmi les industries a changé.

Le rapport se penche sur deux facteurs généraux:

- les changements dans la demande de biens et de services;
- les variations, parmi les industries, du taux de croissance de la productivité.

Le rapport comprend également des données provenant d'une étude élaborée à partir d'une analyse d'entrées-sorties, lesquelles rendent possible la formulation de conclusions quant à l'importance de l'emploi dans l'industrie au cours des années 1970.

Urban FSA and Rural Postal Code Summary Data, 1984

Zero in on the perfect market...

In a competitive world, you can't afford to miss reaching your ideal target market or locating the best product testing area. Our most recent small area reference product will make sure you don't.

Urban FSA (Forward Sortation Area) and Rural Postal Code Summary Data, 1984 presents a demographic and socio-economic portrait of the residents of 1,000 urban and 6,000 rural postal code areas. The data present 27 different population characteristics, including age, sex, income and employment status. Using the data in this report, you would find that in Bagot, Manitoba, 84% of taxfilers were married and that their average income was \$8,500. Or that the average worker in West Vancouver's British Properties earned \$17,900 compared with \$9,100 for the average worker in Vancouver's Chinatown.

This invaluable reference book for Canadian marketers and mail order specialists is available in five editions: one for all of Canada, and one for each of Canada's four major regions.

Tableaux sommaires pour RTA urbaines et codes postaux ruraux, 1984

Viser le marché idéal...

Dans un monde où la concurrence est vive, vous ne pouvez vous permettre de rater votre marché cible idéal ou votre meilleur marché-test. Notre outil de référence le plus récent sur les petites régions est une garantie de réussite.

Tableaux sommaires pour RTA urbaines et codes postaux ruraux, 1984 brosse un portrait démographique et socio-économique des résidents de 1,000 régions urbaines et de 6,000 régions rurales de codes postaux (RTA, régions de tri d'acheminement). Les données portent sur 27 caractéristiques de la population, dont l'âge, le sexe, le revenu et l'activité. À partir des données du rapport, vous découvrirez qu'à Bagot, au Manitoba, 84% des déclarants fiscaux étaient mariés au moment de l'étude et que leur revenu annuel moyen était de \$8,500. Ou encore, vous apprendrez que le travailleur moyen de "British Properties" à Vancouver-Ouest gagne \$17,900 annuellement, alors que le travailleur moyen du quartier chinois de Vancouver ne gagne que \$9,100.

Cet ouvrage de référence d'une valeur inestimable pour les spécialistes de la commercialisation est disponible en cinq éditions: une pour le Canada et une pour chacune des quatre grandes régions du pays.

■ Canadian Standard Industrial Classification for Companies and Enterprises, 1980

Does your marketing, financial or analytical work involve a multitude of Canadian companies? If so, Statistics Canada has just developed a comprehensive framework for classifying your "company-based" records and performance statistics.

Our new **Canadian Standard Industrial Classification for Companies and Enterprises, 1980 (SIC-C)** introduces a hierarchical structure for classifying and coding "company-based" records and data. Our SIC-C will also help your economist to analyze Statistics Canada's financial statistics.

Until now our **Standard Industrial Classification for Establishments (SIC-E)** has been the single authoritative source for classifying economic statistics. While it remains the best instrument for classifying employment and production statistics, the new **SIC-C** will complement its role by providing a convenient method of classifying financial statistics or "company-based" records. Using a framework of 18 main industrial sectors (e.g., Energy, Wood and Paper) the **SIC-C** breaks each sector into a hierarchy of smaller units. The whole spectrum of the Canadian economy is covered.

SIC-C is an important resource for all institutions and companies with large "company-based" records and information systems. It is also the authoritative reference manual for the description of industrial coverage of Statistics Canada's industrial financial statistics.

■ Classification canadienne type des industries pour compagnies et entreprises, 1980

Votre travail financier, d'analyse ou de commercialisation vous amène-t-il à tenir compte d'une multitude de compagnies canadiennes? Si c'est le cas, vous serez heureux d'apprendre que Statistique Canada vient tout juste de mettre au point une structure détaillée qui vous permettra de classer vos registres sur les compagnies et vos statistiques sur le rendement.

Notre nouvelle publication **Classification canadienne type des industries pour compagnies et entreprises, 1980 (CTI-C)** présente une structure hiérarchique pour la classification et le codage des données et des registres sur les compagnies. La publication sera aussi utile à l'économiste pour l'analyse des statistiques financières de Statistique Canada.

Jusqu'à maintenant, la publication **Classification type des industries pour les statistiques d'établissement (CTI-E)** était la seule source qui faisait autorité en ce qui trait à la classification des statistiques économiques. Bien que celle-ci demeure la meilleure source de classement des statistiques sur l'emploi et la production, la nouvelle **CTI-C** vient la compléter en présentant une méthode pratique de classification des statistiques financières et des registres sur les compagnies. À partir d'une structure regroupant 18 des principales branches d'activité (par exemple, énergie, bois et papier), la **CTI-C** divise chaque branche en une hiérarchie de sous-unités, lesquelles couvrent tous les aspects de l'économie canadienne.

La publication **CTI-C** est un outil essentiel aux établissements et aux compagnies ayant d'importants registres et systèmes d'information sur les compagnies. Elle constitue aussi l'ouvrage de référence qui fait autorité en ce qui concerne la description de la couverture des branches d'activité faite dans les statistiques financières des industries, publiées par Statistique Canada.

Population Projections for Canada, Provinces and Territories, 1984-2006

This report describes recent, wide-ranging demographic developments, and the issues which they pose to present and future generations. What are the long-term implications of declines in the size of our population; of pronounced increases in the number and proportion of elderly Canadians? The report also projects the size of future consumer markets and annual population changes: births, deaths and net migration.

An invaluable publication for business planners, policy makers, the media, social scientists and members of the public interested in the future of Canada's population.

The Most Important Assessment of Canada's Environment Ever Published

Environment Canada and Statistics Canada have combined their efforts to prepare two new publications, which are intended to increase broad public awareness of the state of Canada's environment and to stimulate discussion about its links to the economy and human health.

The **State of the Environment Report for Canada**, published by Environment Canada, provides an assessment of current environmental conditions, trends and changes across the country. **Human Activity and the Environment: A Statistical Compendium**, from Statistics Canada, is the most comprehensive statistical description of the variety and intensity of human ventures that affect Canada's ecosystem.

Together, these two publications provide a unique source of information on Canada's environment. They will serve as valuable reference tools for government and industry, as well as for consultants, environmentalists, students and the general public.

HOW TO ORDER

Copies of the **State of the Environment Report** (Catalogue No. EN 21-54/1986E) are available through authorized bookstore agents or your local book seller at \$25 per copy in Canada (\$30 outside Canada). The report may also be ordered from:

Canadian Government Publishing Centre
Supply and Services Canada
Ottawa, Ontario K1A 0S9

The **State of the Environment Report**, comprising 276 pages that include charts, tables and maps, examines a variety of stresses on the environment (e.g. pollution loadings, land use changes, resource exploitation) and the effects they have on our ecosystems (e.g. changes in productivity, mix of species, incidence of disease). The report focusses on the links between human activity, natural forces and changes in the Canadian environment.

The **State of the Environment Report** approaches the environment from an ecosystem point of view. The country is divided into 15 ecozones based on natural, rather than jurisdictional boundaries. This innovative approach makes it possible to describe trends and conditions across an area as vast and diverse as Canada.

The report looks at:

- Agriculture
- Forests
- Fresh Water and Marine Environments
- Wildlife
- Contaminants
- Canada in a Global Setting
- Canadians' Perceptions of the Environment
- Land Use Changes

Human Activity and the Environment is a 375-page compendium of environmental, social and economic statistics, which have been compiled from a variety of sources including Statistics Canada and Environment Canada, as well as federal and provincial government agencies. As such, it documents everything from population distribution to mining; from industrial emissions to contaminants in fish.

A wide variety of detailed statistics is presented, in **Human Activity and the Environment**, for ecozones and drainage basins. The 17 technical boxes found throughout eight chapters explain the nature and usefulness of selected data series, as well as the findings of special scientific studies. This report is a valuable statistical reference containing 172 tables, 66 charts and 77 maps, many in colour.

For further information about **Human Activity and the Environment**, please contact your local Statistics Canada reference centre, listed in the blue pages of many telephone books.

L'évaluation la plus importante jamais publiée sur l'environnement au Canada

Environnement Canada et Statistique Canada ont préparé de concert deux nouvelles publications pour sensibiliser les Canadiens à l'état de leur environnement et stimuler la discussion sur les liens entre l'environnement, l'économie et la santé.

Le **Rapport sur l'état de l'environnement au Canada**, publié par Environnement Canada, évalue les conditions environnementales actuelles, les tendances et les changements observés à la grandeur du pays. L'**Activité humaine et l'environnement: un compendium de statistiques**, de Statistique Canada, renferme les données statistiques les plus complètes sur l'impact des diverses activités humaines sur notre écosystème.

Ces deux publications sont une source d'information unique sur l'environnement au Canada. Elles seront utiles à ceux qui travaillent pour le gouvernement et l'industrie, aussi bien qu'aux consultants, aux écologistes, aux étudiants et au grand public.

Vous pouvez vous procurer des exemplaires du **Rapport sur l'état de l'environnement au Canada** (n° de catalogue EN 21-54/1986F) auprès des agents libraires agréés ou de votre libraire pour la somme de 25 \$ l'unité (30 \$ à l'extérieur du Canada). Le rapport peut aussi être commandé du :

Le **Rapport sur l'état de l'environnement**, qui comprend 276 pages, illustrées de graphiques, de tableaux et de cartes, examine une série de stress environnementaux (comme l'accumulation de polluants, les changements d'utilisation des terres, l'exploitation des ressources) et leurs effets sur l'écosystème (comme les changements dans la productivité, la répartition des espèces et l'incidence des maladies). On met l'accent sur les liens entre l'activité humaine, les forces naturelles et les changements observés dans l'environnement.

Le **Rapport sur l'état de l'environnement** présente l'environnement dans une perspective écosystémique. Le pays est divisé en 15 zones écologiques définies par des frontières naturelles plutôt que juridiques. Cette nouvelle grille rend possible la description des tendances et des conditions environnementales à travers un territoire aussi vaste et diversifié que le Canada.

Le rapport aborde les sujets suivants :

- L'agriculture
- Les forêts
- La faune
- Les perceptions environnementales des Canadiens
- Les contaminants
- Le milieu aquatique et marin
- Le Canada dans une perspective d'ensemble
- Les changements dans l'utilisation des terres

L'**Activité humaine et l'environnement** renferme 375 pages de statistiques sur l'environnement, la société et l'économie, recueillies de diverses sources dont Statistique Canada, Environnement Canada et des agences des gouvernements fédéral et provinciaux. C'est pourquoi on y retrouve des données sur une foule de sujets, que ce soit la répartition démographique, les mines, les émissions industrielles ou les contaminants dans le poisson.

L'**Activité humaine et l'environnement** contient aussi des données exhaustives sur les zones écologiques et les bassins hydrographiques. Dix-sept cases techniques réparties sur huit chapitres expliquent l'objet et l'utilité des séries de données retenues ainsi que les résultats de certaines études scientifiques. C'est un outil de référence par excellence qui comporte 172 tableaux, 66 graphiques et 77 cartes dont plusieurs en couleur.

Pour de plus amples renseignements au sujet de l'**Activité humaine et l'environnement**, veuillez communiquer avec le centre de référence de Statistique Canada le plus près, qui apparaît dans les pages bleues de plusieurs annuaires téléphoniques.
